

## The first in class: HSDC-HDnv

Stream-control introduced the first in class high speed camera based on non-volatile DDR3 Spin Torque MRAM. Operating speed is much higher than using usual Flash memory.

New camera is power fault tolerant. Frame rate is the same as usual DDR3-RAM based HSDC-HD camera have.

NOTE: The DDR3 Spin-Torque MRAM is a non-volatile memory that is non-volatile with high endurance at DDR3 speeds.
